EXAMINER'S AMENDMENT

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4/30/2004 has been entered.

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Philip DuBois on 6/21/2004.

The application has been amended as follows:

In the claims:

Claim 26 (currently amended). An isolated nucleic acid comprising a nucleotide sequence [selected from the group consisting] of sequence SEQ ID NO: 1 [and a fragment of this sequence] encoding a protein having α -1,4 glucanotransferase enzymatic activity.

In Claim 28, line 2, delete "a" and insert --the--.

In Claim 29, line 2, delete "a" and insert --the--.

Art Unit: 1638

Claim 31 (currently amended). A plant, or part of a plant, comprising the cloning and/or expression vector of claim 28, in which the level of expression of an α -1,4 glucanotransferase enzyme encoded by the nucleotide sequence [as defined in claim 26] of SEQ ID NO: 1 is increased in the cells of said plant so that said plant produces a modified starch comprising an amylopectin that is enriched in chains containing at least 9 glucose residues, with respect to a starch produced naturally by the plant.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: Claims 26-32 are deemed free of the prior art given the failure of the prior art to teach or reasonably suggest an isolated nucleic acid of SEQ ID NO: 1 encoding a protein having α -1,4 glucanotransferase enzymatic activity; a method of modifying a starch produced in a plant by transformation with SEQ ID NO: 1 wherein the starch of the transformed plant comprises an amylopectin enriched in chains containing at least 9 glucose residues and the transformed plant thereof wherein levels of α -1,4 glucanotransferase enzyme are increased.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
